# Feature Blending

- Adds various forms of "transparency" to features, but only between those features

- Useful for showing concentrations

- Potentially informative and cartographically pleasing

- Useful for any feature classes that overlap, especially point data

# How to find it

# Original View – Points Overlap

# Lighten – Borders Blend

# Screen – Concentrations Shown

# Darken – All Outlines Preserved

# Multiply – Outlines and Concentrations Shown

# Subtract – Intersections Shown

# Professional Examples

# Professional Examples

# Usefulness?

- No real ArcMap equivalent

- Can display continuity, intensity, intersections and other

- Different from a heat map because as you zoom in on a particular feature it retains its original form
